- Built an AI-powered reverse logistics platform that uses Gemini Multimodal AI to automatically evaluate and grade returned products.
- Developed a FastAPI backend with Pydantic validation and asynchronous processing to handle AI responses reliably.
- Added retry mechanisms to improve stability when communicating with external AI APIs.

PatentLens AI | Python, Streamlit, ChromaDB, BM25, Cross-Encoder, SQLite

GitHub: <https://github.com/SAKSHI1243/patent-lens-copilot>

Live Demo: <https://patent-lens-copilot-dz2lmhk66htm8jenely54.streamlit.app/>

- Built a patent search engine that indexes over **1,700 patent documents** using both semantic and keyword-based search.
- Improved search relevance by combining dense vector retrieval, BM25, and Cross-Encoder reranking.
- Reduced inference memory usage by **95%**, making the application run efficiently on CPU.
